

## Welcome to Pulsenmore

The world's first  
at-home ultrasound & telehealth platform

# AT THE CROSSROADS OF TELEHEALTH AND FEMTECH

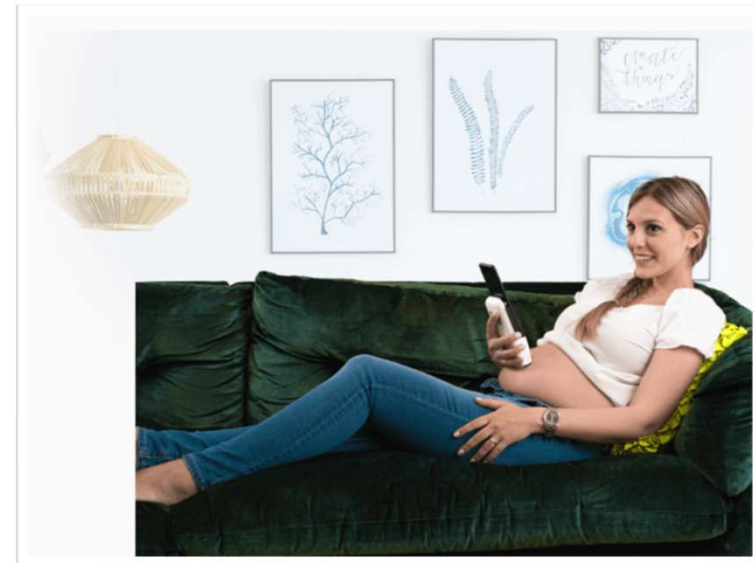

Pulsenmore stands at the intersection of telehealth and femtech.

Our technology integrates telemedicine and ultrasound imaging, offering a comprehensive solution that enhances accessibility and supports the evolving landscape of patient-centered care.

Pulsenmore's clinically validated platform has been successfully implemented, with over 160,000 self-scans performed at home so far!

The technology has proven to reduce maternal anxiety, enhance antenatal attachment, shorten clinical visits, and boost patient satisfaction.

Pulsenmore is set to revolutionize prenatal care by enabling pregnant women to receive routine, high-quality care from home.

# Our vision and mission

Pulsenmore envisions a world where prenatal care is accessible, affordable, and sustainable for all. We aim to revolutionize maternal health by providing remote ultrasound technology that can be used from the comfort of home, transforming traditional prenatal care models and potentially improving outcomes for mothers and babies.

# REIMAGINING ULTRASOUND CARE MODELS & ACCESS

Advancements in technology and telecommunications are closing the gap between healthcare challenges and patients' needs.

Pulsenmore enables HCPs and patients to experience a seamless remote prenatal ultrasound virtual visit.

Premium ultrasound systems

Handheld point of care ultrasound (POCUS)

Taking the hospital home

Patients self scan at home & receive remote professional clinical diagnosis
