

Prenatal care from the comfort of your home.

The Pulsenmore ES is a safe, user-friendly solution that turns your personal smartphone into a home ultrasound device. Prescribed by your physician, and using a clinically validated protocol, scanning is quick and simple, and focuses on assessing a few of the key factors of fetal wellbeing. Once finished, scans are automatically sent to your care-team for review.

Prescribed and clinically validated

Scan at your convenience

The reassurance you need

How it works

- 1 Download the Pulsenmore Mobile App
- 2 Pair the Pulsenmore cradle with your smartphone

- 3 Your physician will prescribe either an App-Guided or Clinician-Guided scan
- 4 When your scan session is completed all images will automatically be sent for clinical review
- 5 Once your scan is reviewed, you will receive the results

Doria Weizman Marley

"The Pulsenmore ES saved my daughter's life"

After doing a Pulsenmore scan in my 39th week, I got a call from the doctor referring me to the ER with too little amniotic fluid. My little girl was born in less than an hour! Every minute was critical at that point and this really saved us!

Prof. Asnat Walfisch

Head of the Hospital for Women, Beilinson Hospital, Israel

The device provides vital information to medical teams, by quickly and accurately assessing the condition of the fetus, granting expectant mothers peace of mind and avoiding unnecessary visits to clinics or the ER.

Shirly Devinkasky

"The device gives me the peace of mind I need."

The home ultrasound is so easy to use. It's compact and does not require much fuss... I even found a quiet corner in the office to use it if necessary. As a single mother, the device gives me the peace of mind I need.

What else do I need to know?

- The device is prescribed per pregnancy, is non-transferable between patients and cannot be used for subsequent pregnancies
- Can be used as early as 14 weeks, for singleton pregnancies only (not designed for use with twins or triplets)
- You'll be able to use the Pulsenmore device throughout your pregnancy as directed and prescribed by your clinician
- Compatible with most Smartphones
