Clinically Significant
Remote Ultrasound

Pulsenmore Home Ultrasound For Remote and Reliable Prenatal Care

Online medical services are increasingly and positively impacting the way healthcare is delivered, with evidence suggesting reduced cost of care, improved outcomes and increased maternal satisfaction.^{1,2,3,4}

The Pulsenmore ultrasound is a practical, safe, and effective solution for remote sonographic fetal assessment.^{5,6,7,8,9}

Prescribed by a physician and complementary to routine diagnostic ultrasound examinations.

The user-friendly mobile app guides the pregnant user through a simple self-scan protocol designed by OBGYNs.

Every scan is reviewed and interpreted by a clinician, and can be documented in the patient's EMR.

How the Pulsenmore System Works

Clinician Dashboard

Review patient scans remotely and interact with patients online.

Self-Scan Device

The handheld ultrasound cradle docks with the patient's personal smartphone.

Mobile App

The patient can conduct a telehealth ultrasound visit or self-scan based on video tutorials.

Pulsenmore Teleultrasound

Ensuring Continuity in Prenatal Care

Improve resource management and remote screening

Enhance patient access to care and earlier detection of warning signs

Increase patient engagement, convenience and satisfaction

Clinical Evidence

Over 110,000 scans performed by patients so far.⁶

Pulsenmore teleultrasound can significantly decrease the duration of visits.⁷

Pulsenmore can improve patients' satisfaction^{5,7,8,9} decrease maternal anxiety and enhance maternal attachment.⁸

Modes of Operation

Clinician-Guided

The real-time teleultrasound consultation allows you to meet your patient online while guiding and controlling the duration and frequency of the patient's scans. The system also allows you to adjust the ultrasound settings for each scan remotely.

App-Guided

The patient follows self-scan protocols on the Pulsenmore mobile app, (developed by OBGYN specialists). Scans are uploaded to the cloud for asynchronous review by clinicians and for evaluation of fetal movement, fetal heart activity, and amniotic fluid.

Trusted by Clinicians, HMOs and Patients

Prof. Eran Hadar

Director, Maternal Fetal Medicine,
Rabin Medical Center, Israel

With Pulsenmore's home ultrasound, doctors and ultrasound specialists can *provide pregnant women with continuous and individualized prenatal care, and the peace of mind that is much needed during pregnancy.* During the COVID pandemic, we progressed a decade in one year and at-home ultrasound is a big part of it.

Lior Wolff

Head of Translational Medical Innovation,
eHealth & Digital Wing, Clalit Health
Services (HMO), Israel

We are shifting healthcare into the patient's hands. We are all aware that there is a shortage in many aspects of medicine – but with the Pulsenmore teleultrasound solution we can turn patients into *engaged partners.*

Doria Wiezman Marely

At 39 weeks I was concerned about feeling my baby moving less, and was advised to do a Pulsenmore home ultrasound scan. Very soon after doing the scan I got a call from the doctor referring me to the ER with too little amniotic fluid. My little girl was born within an hour! *Every minute was critical at that point and this really saved us.*
