

# Moms & clinicians

## ♥ Pulsenmore

**Doria Weizman Marley**

**"Pulsenmore saved my daughter's life"**

After doing a Pulsenmore scan in my 39th week, I got a call from the doctor referring me to the ER with too little amniotic fluid. My little girl was born in less than an hour! Every minute was critical at that point and this really saved us!

**Prof. Asnat Walfisch**

**Head of the hospital for women, Beilinson Hospital**

The device provides vital information to medical teams, by quickly and accurately assessing the condition of the fetus, granting expectant mothers peace of mind and avoiding unnecessary visits to clinics or the ER.

**Shirly Devinkasky**

**"The device gives me the peace of mind I need."**

The home ultrasound is so easy to use. It's compact and does not require much fuss... I even found a quiet corner in the office to use it if necessary. As a single mother, the device gives me the peace of mind I need.

## What else do I need to know?

The device can be used as early as 14 weeks, for singleton pregnancies only (not designed for use with twins or triplets)

You'll be able to use the Pulsenmore device throughout your pregnancy as directed and prescribed by your clinician

The device is prescribed per pregnancy, is nontransferable between patients and cannot be used for subsequent pregnancies

Home Ultrasound

## Prenatal care from the comfort of your home

© 2025. The Pulsenmore ES Home Ultrasound system is cleared for commercial use in EU countries, the UK, Brazil, Australia, Switzerland and Israel. In the U.S. it is limited by federal law to investigational use only. Pulsenmore and the Pulsenmore logo are trademarks of Pulsenmore Ltd.

**Stay connected.  
Feel closer.  
Worry less.**

Pulsenmore brings peace of mind to your pregnancy by making expert care accessible from home. Feel reassured between 'in-person' clinic appointments. Strengthen your bond, involve your loved ones, and get guidance and support from clinicians. Experience prenatal care with confidence and ease.

## What makes Pulsenmore unique?

Prescribed & clinically validated

Scan at your convenience

Peace of mind & the reassurance you need

# How it works

- 1 Receive cradle & download the Pulsenmore Mobile App.
- 2 Pair the Pulsenmore cradle with your smartphone.
- 3 Your clinician will prescribe either an App-Guided or Clinician-Guided scan.
- 4 When your scan session is completed images will automatically be sent for clinical review.
- 5 Once your scan is reviewed, you will receive the results.
